

PRESS RELEASE

May 2001

NEXTROM TORONTO REASSUMES THE **CEECO** NAME

As a continuance of Nextrom's announced new strategy of focusing on the supply of manufacturing solutions and services for the Fiber Optics industry, the Rotating Equipment operation in Toronto will reassume the original Ceeco name. This positive news is due in part to Toronto's current strong position in 2001, with its healthy order backlog, and to the successful restructuring and reorganization of the company

Since its formation in the late 1960's, its customers have known Ceeco as a premier supplier of Rotating Equipment around the world. With its re-emergence as an autonomous division, Ceeco will continue to provide high quality innovative solutions to meet the product needs of its customers worldwide.

A cornerstone of the company's success has always been understanding the current challenges related to the construction of various forms of cable and flexible pipe, and then overcoming them through innovative machine design. Ceeco will continue to support its customers by focusing on manufacturing solutions for the following products:

- Data and Telephone communication cable;
- Energy cable;
- Optical Fiber cable, and
- Flexible Pipe.

Ceeco is committed in its aim of providing its customers with the highest possible quality service in the wire and cable industry. Our experienced sales and services staff will be contacting you in the near future, or will be available at Interwire, Stand 120, to address any questions related to the new organization.
